# SECURITY (COMP0141): USING ENCRYPTION

# (UN)ENCRYPTED WEB TRAFFIC

# (UN)ENCRYPTED WEB TRAFFIC

---

How can Alice (as a human) know if her web traffic is encrypted or not?

# HTTPS

---

the green padlock used to mean that your traffic was encrypted  
(you are using secure HTTP, or **HTTPS**)

# HTTPS

---

no padlock = no encryption

padlock = encryption

this is a **positive indicator**  
(there is something there in the good case)

# DO POSITIVE INDICATORS WORK?

“The Emperor’s New Security Indicators”, Schechter et al., 2007.

Score	First chose not to enter password...	Group								Total	
		1		2		3		1 ∪ 2			
0	upon noticing HTTPS absent	0	0%	0	0%	0	0%	0	0%	0	0%
1	after site-authentication image removed	0	0%	0	0%	2	9%	0	0%	2	4%
2	after warning page	8	47%	5	29%	12	55%	13	37%	25	44%
3	never (always logged in)	10	53%	12	71%	8	36%	22	63%	30	53%
Total		18		17		22		35		57	

significant increase when presented with a  
negative indicator (warning page)

negative indicator

# HTTPS INDICATORS IN 2018

Status	Chrome	Firefox	Edge	Safari	Opera	Notes
HTTP						No indicator shown.
Mixed HTTPS (active content)						Some browsers warn against mixed active content.
Mixed HTTPS (passive content)						All browsers show a positive indicator. Most commonly a lock icon.
HTTPS (DV)						All browsers show a positive indicator.
HTTPS (OV)						All browsers show a positive indicator.
HTTPS (EV)						All browsers show a positive indicator, but most browsers show the verified name of the organization in a green color.

# HTTPS INDICATORS TODAY: DEMO

# USABLE ENCRYPTION

## Success story for usable security!

- Studies showed that old (positive) indicators were not usable and thus did not protect users
- As a result, browsers moved or are moving towards negative indicators instead

This was enabled by technological advances (which we'll see next week) that also made HTTPS much more widespread
